PROJECTS

Untrippd (Rails, PostgreSQL, React, Redux)   Live   Github

A fullstack, single-page travel recommendation sharing app, inspired by Untappd

- Optimizes aggregation of suggestions using polymorphic Suggestion model and custom SQL queries
- Enables suggestion location-tagging and images via Google Maps API, AWS
- Keeps code DRY with partials, reuse of SuggestionFeed React component

GM-84 Plus (JavaScript, jQuery, Canvas, Math.js)   Live   Github
Browser-based graphing calculator

- Engineered math features (e.g. trace, solutions, graph animation) from scratch
- Responsive design includes mouse-scroll zoom and drag-and-drop panning
- Utilizes HTML5 Canvas for pixel-level detail in graphs and calculations

Chess (Ruby)   Github
Terminal-based chess game that offers 1-player and 2-player mode

- Maximizes use of object-oriented design principles, including multiple levels of inheritance for chess pieces (e.g. Piece → Sliding Piece → Rook)
- Created Chess AI that looks to capture pieces and put opponent in check
- Guides user by highlighting valid moves and providing descriptive errors
